

El Dorado Irrigation District

Supplemental Statement of Water Diversion and Use

The report requires data on the “Amount Directly Diverted or Collected to Storage.” Previous reporting forms did not require this information, and the reservoir(s) covered by this right collect(s) from a watershed with multiple and diffuse inflows. Consequently, El Dorado Irrigation District does not have the ability to collect the required information. Amounts reported as “Collected to Storage” are positive changes in monthly reservoir storage recorded during the reporting period. Because multiple rights cover the same reservoir(s), the reported changes in storage and “Amount Beneficially Used” are distributed among the various rights. Also, when a single right covers multiple reservoirs, the reported changes in storage represent a cumulative, distributed total from all reservoirs encompassed by the right. The data given in the “Rate of Diversion” column are the maximum average daily releases from storage in the given month. When a single right covers multiple reservoirs, the reported rate of diversion is the highest cumulative daily rate from all reservoirs.
